BALL MILLS
FINE COMMINUTION IN THE LAB

FRITSCH BALL MILLS: THE MOST EFFECTIVE MILLS FOR SMALL AND VERY SMALL QUANTITIES

- For fast batchwise grinding of medium-hard to hard samples
- For achieving the finest particle sizes
- Dry or wet grinding
- For mixing
- For homogenisation

FRITSCH is an internationally respected manufacturer of application-oriented laboratory instruments. For more than 80 years, laboratories worldwide have relied on our FRITSCH. ONE STEP AHEAD. experience, quality, service and innovation - for fast industrial applications as well as for especially accurate results in industry- and research laboratories. See for yourself.
FRITSCH Ball Mills

are the most effective laboratory mills for rapid batchwise comminution of medium-hard to hard samples down to the finest particle size. The grinding can take place dry or wet. Grinding sets of many different materials are available. FRITSCH Ball Mills are also the ideal and reliable lab assistants for mixing and homogenising.

Grinding in a Ball Mill takes place through impact and friction of the sample between the grinding balls and the inside wall of the grinding bowl respectively the mortar.

For this, the grinding bowl or mortar performs vertically oscillating movements of high amplitude and high frequency, which are transferred to the grinding vessel.
THE ULTRA-EFFECTIVE FRITSCH MINI-MILL

- For smallest sample quantities up to 5 ml
- Max. feed size 6 mm, final fineness 5 μm
- Dry, wet and cryogenic grinding in a single unit
- Extremely compelling in price and in performance
- Extremely effective grinding due to spherical grinding bowl with plug-style closure and practical quick clamping system
- Precisely adjustable configurable and reproducible grinding time
- Very simple operation, cleaning and maintenance

The ultra-compact FRITSCH Mini-Mill is the ideal assistant for fine comminution of smallest quantities – for wet grinding as well as for dry or cryogenic grinding. Its special, spherical grinding bowl ensures much better performance in grinding, mixing and homogenising compared with similar models. With a footprint of just 20 x 30 cm and a weight of 7 kg, it easily fits anywhere. It’s smart, is extremely user-friendly, inexpensive, and convinces with impressive results: small, fast, effective.

UNMATCHED EFFECTIVENESS WITH SPHERICAL GRINDING BOWLS

Available only from FRITSCH: In special consideration of the ball mill grinding concept, we developed for the PULVERISETTE 23 a grinding bowl with interior walls that are spherical instead of cylindrical. Your advantage: Unmatched grinding performance with a significantly improved grinding effect, much easier recovery and simpler cleaning. Typical FRITSCH!

Especially practical: The spherical grinding bowls of the PULVERISETTE 23 are assembled simply and quickly, just twist and turn!

PTFE bowl

The 5 ml PTFE bowl is specially suited for using the FRITSCH PULVERISETTE 23 in biotechnology applications. For example, it is possible to break up fungus or yeast cells, deep frozen tissue and cells in only a few minutes with this special plastic bowl and a 10 mm steel ball. It is also possible to pre-cool the entire bowl in liquid nitrogen.
**TECHNICAL DATA**

**Electrical details**
100-240 V/1~, 50-60 Hz, 90 watt

**Weight**
Net 7 kg
Gross 8 kg

**Dimensions** w x d x h
Bench top instrument 20 x 30 x 30 cm
Packaging w x d x h
Cardboard box 37 x 25 x 34 cm

**Emissions value of workplace according to DIN EN ISO 3746:2005**
Approx. 75 dB(A) (depending on the material to be ground and grinding bowl/balls used)

**Order no.**
23.1000.00

---

**METAL-FREE GRINDING**

With grinding bowls made of zirconium oxide, you can ensure that your samples remain absolutely metal-free.

---

**IDEAL FOR**

**Chemical analysis**
Comminution and homogenisation of grinding samples for creation of compacts for x-ray fluorescence and infrared spectroscopy (e.g. potassium bromide tablets)

**Environmental research**
Soils in contaminant analysis, humic acid determination, botanical materials in residue analysis of fertilisers and pesticides, pulping of seeds

**Pharmaceuticals and medicine**
Kidney and gallstone analysis, breaking up tablets, pharmaceutical ingredients

**Forensic analysis**
Hair analysis for genetic testing and drug tests, preparation of extremely small particles for chemical analysis, textile fibre and bone analysis

**Biotechnology**
Comminution of deep frozen tissue samples

**Material synthesis**
Creating mixtures for catalytic tests on polymers, ceramic analysis

---

**FACTS AND ADVANTAGES**

- Fast, reproducible comminution
- Small grinding bowl volumes
- Low contact surface area with grinding elements
- Accessories: Grinding bowls and grinding balls in 4 different materials (ordered separately)
- Grinding bowl oscillations: 900 - 3,000 oscillations/min at 9 mm amplitude
- Regulated oscillation frequency (15 - 50 Hz)
- CE mark
- 2-year guarantee
FRITSCH Vibration Micro Mill

THE FRITSCH VIBRATORY BALL MILL

- Max. feed size 5 mm
- Max. sample quantity 10 ml
- Final fineness 10 μm
- Effective comminution in a narrow, homogeneous particle size range
- Loss-free grinding in a closed vessel – dry or in suspension
- Cryogenic grinding and simple embrittling in the cryo-box
- Modular system for simple conversion to dry or wet sieving
- Adjustable oscillation amplitude for easy adaption of the vibration energy to the grinding sample

CRYOGENIC GRINDING

For fast embrittlement of soft, slightly oily, fatty or moist materials for cryogenic grinding, we offer the FRITSCH cryo-box:

Simply insert the filled grinding set into the cryo-box and fill it with liquid nitrogen with this method even extremely difficult-to-grind samples can be ground down to analysis fineness. And the thick insulation ensures a particularly efficient use of coolant.

GRINDING AND SIEVING IN ONE UNIT

For dry and wet sieving, the FRITSCH PULVERISSETTE 0 can be converted to a Vibratory Sieve Shaker for quantitative particle size analysis of solids (measuring range 32 μm – 63 μm) and suspensions (measuring range 20 μm – 10 mm) by simply inserting corresponding sieves. All related information can be found at www.fritsch.de/sieveshakers.
**ROHS**
The FRITSCH Vibratory Micro Mill PULVERISETTE 0 is recommended for sample preparation of RoHS tests (Restriction of Hazardous Substances).

**FACTS AND ADVANTAGES**

- Grinding and sieving in one unit
- Agglomeration phenomena avoided
- Ergonomically positioned membrane keyboard IP65, splash-proofed
- Recyclable plastic housing
- Convertible for cryogenic grinding
- Window for observing the grinding progress
- Digital timer
- Standard equipment includes grinding head (included in price)
- Accessories: Mortars and grinding balls in 6 different materials (ordered separately). All mortars are rimmed in an aluminium shell.
- Grinding bowl oscillations 3,000 – 3,600 oscillations/min at 1 – 3 mm amplitude
- CE mark
- 2-year guarantee
GRINDING BOWLS AND GRINDING BALLS

For your FRITSCH Mini-Mill PULVERISETTE 23, you require one grinding bowl and the corresponding number of grinding balls. To avoid undesired contamination of the sample through abrasion, we offer a selection of 4 different material types. Normally, grinding bowls and balls of the same material are used. In principle, the grinding bowl material must be harder than the material to be ground. Important: Pay attention to the specified useful capacity as this is not identical to the bowl volume!

MORTAR AND GRINDING BALLS

For the FRITSCH Vibratory Micro Mill PULVERISETTE 0, you require a mortar, which must be equipped with a grinding ball. All FRITSCH mortars are rimmed, regardless of the material, in a robust shell of shock-resistant aluminium, which protects the actual mortar. To optimally adapt the grinding to any sample type, you can choose between 6 different materials, whereby mortars and grinding balls of the same material are generally used. Important: The mortar material must always be harder than the material to be ground. For cryogenic grinding, use mortars and grinding balls made of steel or tungsten carbide. The PULVERISETTE 0 can also be converted to a Vibratory Sieve Shaker ANALYSETTE 3 SPARTAN for dry and wet sieving. All related information can be found at www.fritsch.de/sieveshakers – or simply ask us!

1) Grinding sets made of agate and sintered corundum are not suitable for cryogenic grinding.
EXCELLENT GRINDING RESULTS WITH FRITSCH BALL MILLS

ENVIRONMENTAL ROHS – MOBILE PHONES ARE REDUCED TO DUST

For comminution of individual electronic components, such as mobile phones for RoHS analysis, the FRITSCH Vibratory Micro Mill PULVERISETTE 0 delivers very good results – depending on the sample characteristics at room temperature or with cryogenic grinding after embrittlement with liquid nitrogen in the practical FRITSCH cryo-box.

PHARMACEUTICALS – BONE PREPARATION FOR RESEARCH

For comminution of bones, e.g. for XRF analysis for medication development, we recommend the Vibratory Micro Mill PULVERISETTE 0 with mortar and grinding ball made of zirconium oxide or steel. The special advantage: Gentle sample preparation without development of heat or thermal loads.

ANALYSIS – DRUG TESTS THROUGH HAIR ANALYSIS

For fast and simple preparation of hair samples for analysis for drug traces, roughly 300-500 mg of hair can be ground to a fine powder (< 100 µm) in just 5 minutes in the FRITSCH Mini-Mill PULVERISETTE 23 using a 15 mm steel ball in a 15 ml steel bowl.

PLASTICS/TEXTILES – FIBRE ANALYSIS WITH KBR TECHNOLOGY

For fibre analysis with infrared spectroscopy, the PULVERISETTE 23 provides the ideal preparation of the sample for creation of homogeneous pellets of potassium bromide (KBr). With addition of 20 mg of KBr, the fibre sample is ground to a homogeneous powder in 3 minutes. With an additional 250 mg of KBr that was ground for 90 seconds to a fine consistency in the PULVERISETTE 23, the ground sample is then ground further and homogenised in only 30 seconds.
